

**Amendments to the Claims**

The following listing of claims will replace all prior versions and listings of claims in the application:

**Listing of Claims:**

1. (Previously presented) A keyboard for a handheld electronic device, the keyboard configured for use with thumbs of a user and comprising: a left set of one or more rows of input keys and a right set of one or more rows of input keys separated by a centerline, the left set of one or more rows of input keys arranged in one or more respective arcs having one or more respective arc centers located to the left of the centerline, and the right set of one or more rows of input keys arranged in one or more respective arcs having one or more respective arc centers located to the right of the centerline; and a substantially rectangular numeric keypad for entering phone numbers centered below the left and right sets of one or more rows of input keys.
2. (Original) The keyboard of claim 1, wherein the keyboard has a QWERTY keyboard layout.
3. (Withdrawn) The keyboard of claim 1, wherein the keyboard has a DVORAK keyboard layout.
4. (Original) The keyboard of claim 1, wherein the one or more respective arc centers of the left set of one or more rows of input keys are concentric and the one or more respective arc centers of the right set of one or more rows of input keys are concentric.
5. (Original) The keyboard of claim 1, wherein the one or more respective arc centers of the left set of one or more rows of input keys are collinear and the one or more respective arc centers of the right set of one or more rows of input keys are collinear.
6. (Original) The keyboard of claim 1, wherein the one or more respective arc

centers of the left set of one or more rows of input keys are collinear and located in at least one of a vertical line and a horizontal line and the one or more respective arc centers of the right set of one or more rows of input keys are collinear and located in at least one of a vertical line and a horizontal line.

7. (Previously presented) The keyboard of claim 1, wherein the respective arcs of the left set of one or more rows of input keys and the respective arcs of the right set of one or more rows of input keys include radii of curvature between 10 mm and infinity.

8. (Previously presented) The keyboard of claim 1, wherein the arcs of the left set of one or more rows of input keys and the Previously presented arcs of the right set of one or more rows of input keys form respective angles between 0 and 90 degrees with respect to the centerline.

9. (Previously presented) The keyboard of claim 1, wherein each row of the one or more rows of each set include a left-most input key and a right-most input key, the left set of one or more rows are opposite the right set of one or more rows, and lines drawn through the left-most input key and the right most input key of opposite rows intersect the centerline to form a V shape.

10. (Previously presented) A keyboard for a handheld electronic device, the keyboard configured for use with thumbs of a user and comprising: a left set of one or more rows of input keys including a left-most input key and a right most input key and a right set of one or more rows of input keys including a left-most input key and a right most input key separated by a centerline, the left set of one or more rows are opposite the right set of one or more rows, and lines drawn through the left-most input key and the right most input key of opposite rows intersect the centerline to form a V shape; and a substantially rectangular numeric keypad for entering phone numbers centered below the left and right sets of one or more rows of input keys.

11. (Original) The keyboard of claim 10, wherein the keyboard has a QWERTY keyboard layout.

12. (Withdrawn) The keyboard of claim 10, wherein the keyboard has a DVORAK keyboard layout.

13. (Original) The keyboard of claim 10, wherein the lines drawn through the left-most input key and the right most input key of each row intersect at the centerline to form an angle with respect to the centerline that is between 0 degrees and 90 degrees.

14. (Original) The keyboard of claim 10, wherein the left set of one or more rows of input keys are arranged in one or more respective arcs having one or more respective arc centers located to the left of the centerline, and the right set of one or more rows of input keys are arranged in one or more respective arcs having one or more respective arc centers located to the right of the centerline.

15. (Previously presented) The keyboard of claim 14, wherein the respective arcs of the left set of one or more rows of input keys and the respective arcs of the right set of one or more rows of input keys include radii of curvature between 10 mm and infinity.

16. (Previously presented) A method of using a keyboard for a handheld electronic device with left and right thumbs of a user, the method comprising: providing a thumb keyboard for a handheld electronic device including a left set of one or more rows of input keys including a left-most input key and a right most input key and a right set of one or more rows of input keys including a left-most input key and a right most input key separated by a centerline, the left set of one or more rows are opposite the right set of one or more rows, and lines drawn through the left-most input key and the right most input key of opposite rows intersect the centerline to form a V shape; and a substantially rectangular numeric keypad for entering phone numbers centered below the left and right sets of one or more rows of input keys; using only the left thumb to input information into the handheld electronic device using the left set of one or more rows of input keys; using only the right thumb to input information into the handheld electronic device using the right set of one or more rows of input keys.

17. (Currently amended) The method of claim 16, wherein the keyboard has at least one of a QWERTY keyboard layout and a DVORAK keyboard layout.

18. (Original) The method of claim 16, wherein the lines drawn through the left-most input key and the right most input key of each row intersect at the centerline to form an angle with respect to the centerline that is between 0 degrees and 90 degrees.

19. (Original) The method of claim 16, wherein the left set of one or more rows of input keys are arranged in one or more respective arcs having one or more respective arc centers located to the left of the centerline, and the right set of one or more rows of input keys are arranged in one or more respective arcs having one or more respective arc centers located to the right of the centerline.

20. (Previously presented) The method of claim 19, wherein the respective arcs of the left set of one or more rows of input keys and the respective arcs of the right set of one or more rows of input keys include radii of curvature between 10 mm and infinity.
